Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Art Unit: 1745

1. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Throughout the specification, applicant has recited that positive and negative electrolytes exist within flow chambers that flow through the battery in contact with their respective electrodes to effect half-cell reactions at the electrodes. The term "electrolytes" is improper. The term that should be used is --electrolytic--. This is because these solutions that circulate through the flow chambers are actually electrolytic solutions that contain active material that react with the electrodes to produce a chemical reaction. In a battery, the electrolyte is used only to provide a medium that allows the ion transport mechanism between the anode and the cathode in a cell to take place. The electrolyte does not provide the active materials for reaction in the cell as the case for the electrolytic solutions in a redox battery. Reference is made to EP 814527- cited by applicant and to the two US patents cited by the examiner in this action for the wording in these patents to "electrolytic" solutions. These solutions are circulated within a redox battery, which solutions contain active material used in the battery.

Applicant is cautioned against the insertion of new matter in response to the above rejection.

2. In view of the fact that it is unclear exactly what constitutes applicant's invention, a prior art search of relevant prior art could not be conducted.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is 703-308-1795. The examiner can normally be reached on alternate Fridays.
